

PFAS Declaration

Dear Customer,

There is an initiative in the EU where an intention to restrict PFAS substances is being prepared. We have been following these developments very closely right from the start - also in coordination with the associations.

Basically, we currently have to assume that the products we manufacture (electric motors, servo drives, filters, chokes, cables, etc.) contain PFAS through the installed components and individual parts such as semiconductors, seals, cables, etc.

We are currently evaluating and classifying the potentially affected components and purchased parts. These purchased components may contain PFAS without it being obvious. Therefore, a detailed review of our supply chain is required before we can make a clear statement.

We are examining possible replacements for some components, but for others there are currently no alternatives in sight. The elimination of PFAS will therefore be one of the major challenges for the industry in the coming years.

We are aware of the environmental risks, support the cause of sustainability and strive to reduce critical substances. For the time being, our products remain available with the known properties and materials.
